My involvement:

**Content Creation** Branding

UI design

Deployment

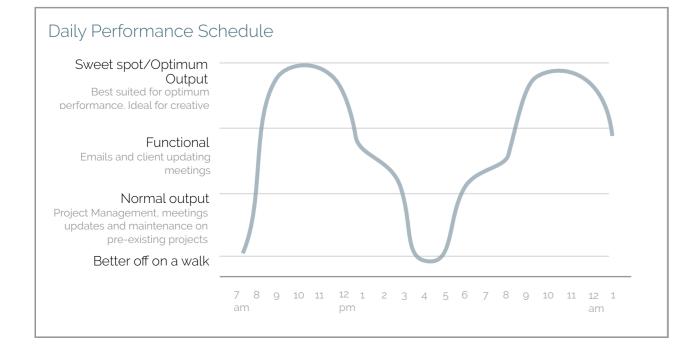

Project Management (international)

Frontend IOS storyboarding

#### Studied Applied Mathematics at University of California Los Angeles

Classes in C++ and R

2014

# A little more about Lucas

## Freetime Physical

I believe physical stimulus is crucial for mental productivity. I have spend a long time looking for outlets that cultivate power, flexibility and the creative use of those resources. This search led me to rock climbing, gymnastics and movement.

## Freetime Mental

I love exploring the processes used to distill information from the intuitive to the formally understood.

Many of my side projects are derivatives of this concept. The analysis of methods by which we utilize the digital space to capture and distill the abstract conception of a thought to the structured formalized state required to be a useable product.

Simply put, I am obsessed with the process and workflows involved in capturing and producing ideas to things.
